Rotorcraft Capability Assessment and Tradeoff Environment

S&T Campaign: Sciences for Maneuver Platform Mechanics

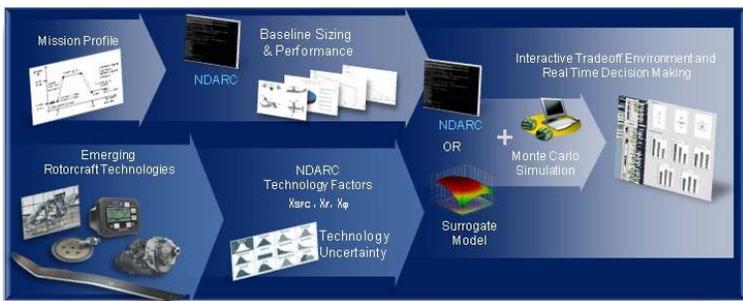

Eric Spero, (410) 278-8743, eric.spero.civ@mail.mil

Rajneesh Singh, Ph.D., (410) 278-4022, rajneesh.k.singh.civ@mail.mil

Research Objective

Through development of an interactive capability tradeoff process and decision-making environment:

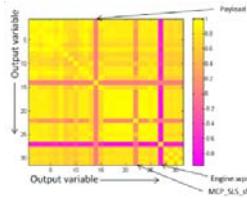

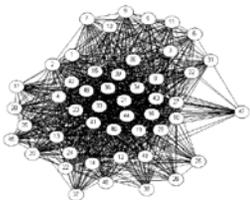

- Assess system-level impact of rotorcraft technologies
- Recommend portfolios based on multiple objectives
- Understand the relationship between technology attributes and system capability gaps

Technology Insertion Analysis in Rotorcraft Conceptual Design

Challenges

- Accurate technology representation in a modeling environment
- Inclusion of mission effectiveness, reliability, and cost in a quantitative tradespace
- Model fidelity and multivariable mapping
- Tracking and controlling uncertainty propagation through the design process

Variable Partitioning and Ranking Challenging due to Interdependencies

Rotor System	Active Rotor	Active Tail	Active Main Control	Active Tail
Power	Active Swashplate	Engine	Active Pitch Links	Compressor Tech
	Transmission	Helicopter	Torque Inertia	Gear A
Avionics	Avionics	Value A	Value B	Value C
	Body	Compass Peak	Compass Peak	Compass Peak
Materials	Blades	Composites	Blades	Composites
	DRS	SWL	DRS	SWL
Situational Awareness	Survivability	DRS	SWL	DRS
	Survivability	DRS	SWL	DRS
New/Prototype	Comms	DRS	SWL	DRS
	Engagement & Effects	Detection	DRS	SWL

Interactive Technology Selection and Technology Portfolio Frontiers

ARL Facilities and Capabilities Available to Support Collaborative Research

- Access to High Performance Computing facilities
- Access to multifidelity rotorcraft conceptual design tools
- Access to rotorcraft technology subject matter experts

Status

- An initial interactive, rapid, visual trade-off environment has been created
- Small set of technologies translated into model inputs using calibration factors from literature and SMEs
- Approach and tool verified; validation path forward
- Technology portfolios recommended to user based on min/max objectives

Complementary Expertise/Facilities/Capabilities Sought in Collaboration

- Development of interactive, web-based applications
- Application of statistical techniques to quantify technology impacts based on empirical data
- Multiple stakeholder interactions and value negotiation
- Incorporation of higher fidelity modeling and simulation into rotorcraft conceptual design and capability trades
- Reliability analysis of rotorcraft propulsion components linked to conceptual design process and tools
- Advanced technology modeling and representation techniques
